Her neighbors were discussing the character of a venerable woman whom they esteemed to be wise in her generation, but a young man said it struck him that she showed great lack of wisdom in one respect. "What is that, pray?" inquired one of the group. "Why," said the young man, "she always puts out her tubs to catch soft water when it's raining hard."

Bar Practice.

A cockney solicitor, who was characteristically mixed up in the use of his "h's" happened to meet one of the wits of the American bar. The Englishman, commenting on the legal profession of Philadelphia, said that its members were very proficient and learned, but that they were absolutely ignorant on the subject of "hentials." "Ah," answered the American, "my dear sir, we may be ignorant of the 'hential,' but our knowledge of the 'cocktail' is unsurpassed." — Philadelphia Public Ledger.

McMinnville, Tenn.—Mrs. Ocie Jett, of this place, writes: "I don't believe I would be living today, if it hadn't been for Cardui. I lay in bed 27 days, and the doctor came every day, but he did me no good. Finally, he advised an operation, but I would not consent, and instead took Cardui. Now I am going about the house, doing my work, and even do my washing. Cardui worked wonders in my case. I am in better health than for five years." Cardui is a strengthening tonic for women. PROFIT IN "BABY BEEF"

Young Animals Must Have Liberal
Supply of Right Feed.

Grain End of Ration Will Need to Be
Increased Steadily During Late
Winter—There is No Better
Feed Than Corn.

Suppose "baby beefs" are to be finished for the market next fall. This means that they must have a liberal supply of the right kind of feed all winter long, feed that will keep them growing in bone and frame and at the same time developing in an all-around manner. The grain end of the ration will need to be increased steadily during the winter, writes L. Hunt of Kansas in Farm Progress. There is no better feed than corn for this purpose, and it should be fed liberally, using, say, from one-half to three quarters corn in the grain ration. Use bran and oil meal for the remainder.

A Good Type of Feeder.

ing redtop or timothy hay let about one-fifth of the ration be oil meal or cake. Watch the calves and increase the ration as they take on size and weight. If they come along all right during the winter they ought to weigh around 800 or 900 pounds by spring, and on a good pasture they are soon ready for market. It is really a better plan, however, to put them on a fattening ration early in the spring and finish them on dry feed.

Feeding on Alfalfa.

and alfalfa ten per cent concentrates in the grain ration will be plenty, but from 15 to 20 per cent is needed when the calves are on bluegrass or timothy. The calves ought to be ready for market by the middle of June and weigh around 1,100 pounds. Calves to be finished as two-year-olds should be grown more slowly. Roughage and a little grain will see them through their first winter, and they should make their way on the pasture the next summer. The second winter they should be fed hay or alfalfa and some grain. Give them all the roughage they can eat. Where there is no legume hay feed them some oil meal along with the grain.

TONIC FOR AILING CHICKENS

Give Hens Physic When Systems Near
Cleaning Out—Give Epsom Salts
in Their Mash.

When hens go off their feed and you suspect that their systems need cleaning out, give them a physic, as you would a person. If it is a single fowl a half teaspoonful of epsom salts may be dissolved in water and poured down its neck. For the flock or a pen the salts solution may be used to wet a mash.

It won't hurt the flock to have a physic once in two months anyway, whether they show special signs of needing it or not.

For chicks under three weeks of age a half-pound of epsom salts is enough for 300 of them. Proportional amounts should be given for older fowls.

Little Profit in Squabs Unless Through
Cleanliness Pigeons Are Kept
Free From Vermin.

There is very little chance of making money from squabs unless through cleanliness pigeons can be kept comparatively free from disease and insect parasites.

The stock should be carefully watched and any sick birds removed from the breeding pens. The house should be kept dry, clean, well ventilated, and free from drafts.

The yards should be kept clean either by scraping the surface and adding fresh sand or gravel or by cultivating the land and planting it to grain if possible.

Only good, sound grain should be

"A Pittsburgh amusement purveyor was endeavoring the other day to arrange a contest in a Pennsylvania one-night stand between Leo Pardello, the widely known wrestler, and an opponent to be selected," says Ren Wolf.
